Intervention IP-113: Implementing Diabetes Group Visits in Midwestern Community Health Centers to Improve Diabetes Outcomes among Disadvantaged Patients

Summary

The Diabetes MESSAGES: Medical Care, Education, Social Support and Goal-setting to Empower Self-Management intervention used group visits and text messaging to improve access to and utilization of diabetes care in community health centers across the Midwest. Group visits involved an individual medical visit with a provider; group diabetes education; group social support; and goal setting. Text messaging ran concurrently with the group visits and focused on self-management and disease education. Patients who attended group visits improved their glucose control.

Overview

Purpose of Intervention:

To implement a replicable diabetes group visit program at the regional level to improve healthcare utilization among persons with diabetes

Intervention Type:

Advanced — *Pilot, demonstration or feasibility interventions with adequate methodological rigor that have demonstrated short-term or long-term positive effects on one or more targeted outcomes to improve minority health and/or health disparities through quantitative measures; Studies have a comparison group and are published in a peer-review journal.*

Intervention Details

Intervention was Primarily Driven, Led, or Managed by:

Both Community and Academic/Clinical Researchers

Results

Intentions

Improve minority health or the health of other populations with health disparities (e.g. rural populations, populations with low SES)

Intervention Primary Outcome:

Improve diabetes processes of care; knowledge, attitudes, and skills for diabetes self-management; clinical outcomes; and health care utilization for patients participating in the diabetes group visit program.

Intervention Secondary Outcome:

The diabetes group visit program is available for dissemination among and use by health centers and health care providers at the local, state, and national levels.

Key Findings:

The five-year cluster randomized trial was conducted to test the impact of diabetes group visits on patient outcomes in community health centers in the Midwest. The academic team from University of Chicago partnered with the Midwest Clinicians' Network (MWCN). The cluster randomized controlled study recruited adults with diabetes mellitus with glycosylated hemoglobin, A1C greater than or equal to eight percent: 75 intervention and 120 usual care. Group visit patients completed a six-month program. Primary outcome wasA1C change from baseline to 12 months. Participants improved their A1C by 0.38%–0.40% with no difference across arms (p=.63). Group visit patients improved their diabetes social support, knowledge, and distress and were more likely to

receive guideline-based care compared with control. Group visit patients with anxiety or depression were more likely to have a visit with behavioral health compared with usual care (p=.02).

Statistical Method Used:

Compared baseline characteristics between the intervention and usual care groups using generalized estimating equations (GEE) using the identity link function for continuous variables and the log/log/cumulative logit link function for binary/ordinal/multinomial variables, respectively. We also used linear mixed models (LMMs) and generalized linear mixed models (GLMMs) to model repeated measures over time and to test effects of time, intervention, and interaction between time and intervention.

Evaluations and Assessments

Were Any of the Following Assessments Conducted (Economic Evaluation, Needs Assessment, Process Evaluation)?:

No

Demographic and Implementation Description

Diseases, Disorders, or Conditions:

Type 2 Diabetes

Race/Ethnicity:

African American or Black, American Indian or Alaska Native, Asian, Hispanic or Latino, White, Unspecified

Populations with Health Disparities:

People with Lower Socioeconomic Status (SES), Racial and Ethnic Minority Populations, Underserved Rural Communities

Age:

Middle-Aged Adults (40 - 64 years)

Socio-demographics / Population Characteristics

Community Type:

Rural, Urban / Inner City

Other Populations with Health Disparities:

Unspecified

Geographic Location:

Illinois, Indiana, Elkhart, Lake, Iowa, Des Moines, Sioux, Minnesota, Missouri, St. Louis, Nebraska, Sioux, Wisconsin, Milwaukee

Socio-Economic Status:

Low SES

Minority Health and Health Disparities Research Framework

Community Involvement

The community's role in different areas of the Intervention (Choices are "No Role", "Participation", and "Leadership"):

Design:

Participation

Dissemination:

Participation

Evaluation:

No Role

Implementation:

Participation

Outreach:

Participation

Planning :

Participation

Recruitment:

Participation

Sustainability:

Participation

Characteristics and Implementation

Intervention Focus Area:

Behavior Change, Patient-Clinician Communication, Quality Improvement or Organizational Change

Disease Continuum:

Tertiary Prevention

Delivery Setting:

Clinic / Health Care Facility

Mode of Delivery:

In-person, Online/e-Health, m-Health (mobile)

Who delivered the Intervention?:

Health Educator, Healthcare Professional (Physician, Nurse, Technician)

Conceptual Framework

Intervention Theory:

None

Intervention Framework:

None

Implementation

Intervention Study Design:

Cluster Randomized Controlled Trial

Targeted Intervention Sample Size:

195

Actual Intervention Sample Size:

195

Start Year:

2018

End Year:

2019

Intervention Exposures

Duration of Intervention/How Long it Lasted:

4-6 months

Frequency of Intervention Delivery:

Monthly

Number of Sessions/Meetings/Visits/Interactions:

5-6 Sessions

Average Length of Each Session/Meeting/Visit/Interaction:

1-2 Hours

Format of Delivery:

Group (e.g. Community leaders)

Highest Reading Level of Intervention Materials Provided to Participants:

Grade 6-7

Impact, Lessons, Components

Produced an impact or change beyond the primary or secondary outcome:

No

Essential Aspects for Success:

It would be helpful to have customization options for patients, including choosing topics of interest and most convenient times to attend group visits. Additional functionality such as direct communication, automatic appointment reminders, and other language options would be useful.

Intervention Impact:

Not available

Lessons Learned

Key Lessons Learned and/or Things That Could be Changed or Done Differently:

Having a multidisciplinary team; having strong leadership support; being flexible and prepared to make adjustments to workflow as needed; gathering patient feedback in order to tailor the content of the group visits to their interests and needs; using the group format to enhance goal setting and tracking; accounts should be set up per patient rather than per phone number, especially in the health center setting where patients change numbers often; more lead time may be needed for set up.

Insights Gained During Implementation

Insight Category	Insight Description
Training / Technical Assistance	Community health center staff were trained on core components for the GVs but tailored their curricula to their patients and resources.
Recruitment	Many patients were contacted but not interested in enrolling in the program. Some patients had baseline A1Cs that were below eight percent likely due to repeat testing done closer to the intervention period which came after the recruitment A1Cs were initially identified.

Intervention Components

Intervention Has Multiple Components:

Yes

Assessed Each Unique Contribution:

Yes

Products, Materials, and Funding

Expertise, Partnerships, and Funding Sources

	Used for Implementation	Needed for Sustainability
Expertise		
Clinical Care	Yes	Yes
Health Education / Health Literacy	Yes	Yes
Patient Navigation	Yes	Yes
Technology	Yes	Yes
Research/Data science	Yes	Yes
Partnerships		
Health care facilities (local clinics)	Yes	Yes
Funding Sources		
Public funding (e.g., federal, state or local government)	Yes	Unknown

Product/Material/Tools

	Tailored For Language	Language(s) if other than English	Material
Outreach/Recruitment Tools			
Recruitment and engagement materials	Yes	Spanish	https://voices.uchicago.edu/diabetesgvtoolkit/resources/recruitment-enrollment/
Participant Educational Tools			
What are group visits?	No		https://voices.uchicago.edu/diabetesgvtoolkit/what-are-gvs/
Measurement Tools			
N/A	No		Information about measurement tools was not available.
